

PROFORMA - I

PROJECT PROPOSAL

S.NO.	PARTICULARS	DETAILS
1	Student Names with URN	
2	Project Title	Title
3	Objective	A brief statement of what the project aims to achieve. Must be specific, measurable
4	Problem Statement	Description of the problem being addressed. Highlight its significance, relevance to the aeronautical field, and potential impact.
5	Scope of the Project	Define the boundaries of the project, including what will and will not be addressed. Explain how the project fits within the field of Aeronautical Engineering.
6	Expected Outcomes	Clearly define the deliverables of the project.
7	Timeline	A project schedule broken down into milestones and tasks. Use a Gantt chart or tabular format to depict timelines.
8	Methodology	Detailed plan of how the project will be executed, including: Research methods or approaches. Tools, software, or equipment to be used. Preferably flowchart includes tools & software.
9	Resources Required	Hardware and software. Lab facilities or testing environments. Budgetary requirements, if applicable.
10	Expected Challenges and Risks	Identify potential challenges and risks during project execution. Propose strategies to mitigate these risks.

**Annexures (if applicable) - Any additional documents, such as conceptual diagrams, initial designs, or data supporting the proposal.
